Head Loss in Pipes

$$h = f * \frac{L}{D} * \frac{V^2}{2g}$$

Head Loss in Feet of Water for 1,000 GPM of clean water flowing in a 5,000 foot long Steel Pipe

Installed Steel Pipe Pricing "Capital Cost" for 5,000 feet of pipe vs. Pipe Diameter

Head Loss in Pipes

$$h = f * \frac{L}{D} * \frac{V^2}{2g}$$

Annual Electric Cost for Operating at 1,000 GPM of Waterflow through 5,000 Feet of Clean Steel Pipe

Pipe Capital Cost & Annual Electric Cost vs. Diameter for Flowing 1,000 GPM for a Distance of 5,000 feet

Incremental Investment and Incremental Return (IIIR)

$$y = ax + \frac{b}{x} + c$$

y = the total cost

x = the variable of design

a, b, c are coefficients

$$x = \sqrt{\frac{b}{a}}$$

X = Minimum cost point

The **a** and **b** of optimized pipes & pumping

• **a**

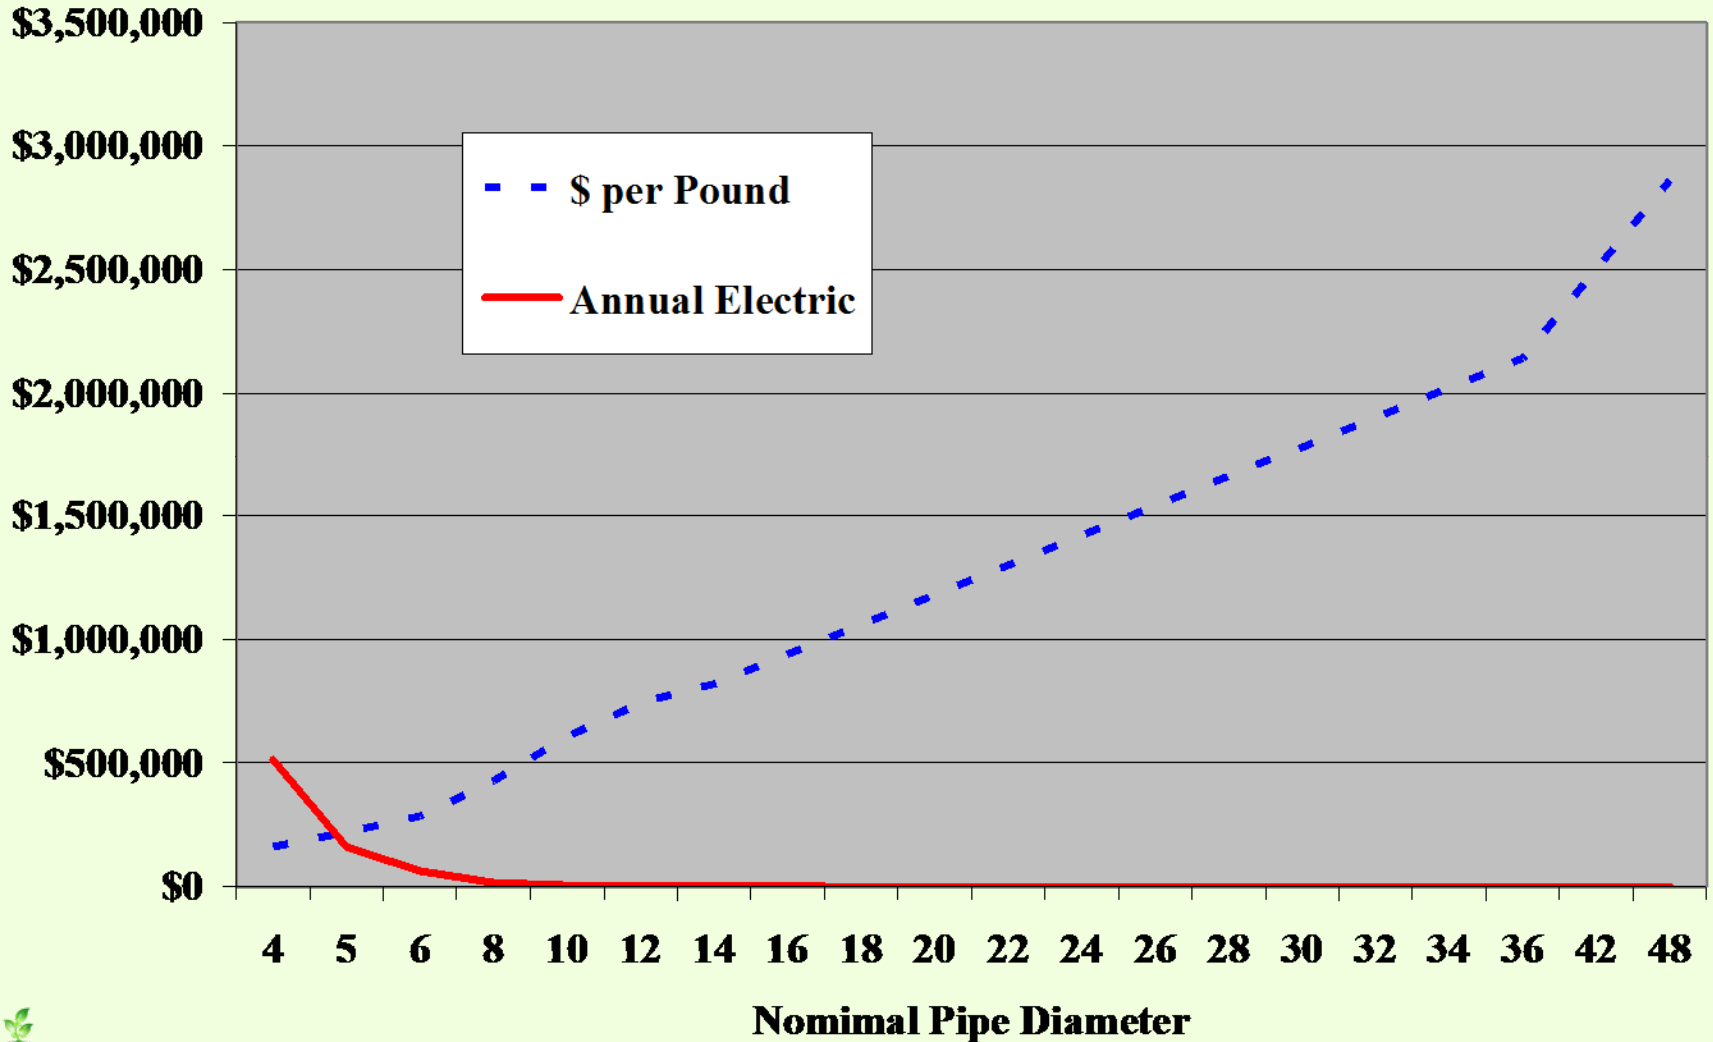

- Annual Cost
- Energy
- Maintenance

• **b**

- First Cost
- Capital
- (A/P, i, n)

Pipe Capital Cost & Annual Electric Cost vs. Diameter for Flowing 1,000 GPM for a Distance of 5,000 feet

The a and b of optimized pipes & pumping

• a

- Annual Cost
- Energy
- Maintenance

• b

- First Cost
- Capital
- **($A/P, i, n$)**

The a and b of optimized pipes & pumping

• a

• b

• **Annual
Cost**

• Energy

• Maintenance

• First Cost

• Capital

• **($A/P, i, n$)**

Pipe Capital Cost & Annual Electric Cost vs. Diameter for Flowing 1,000 GPM for a Distance of 5,000 feet

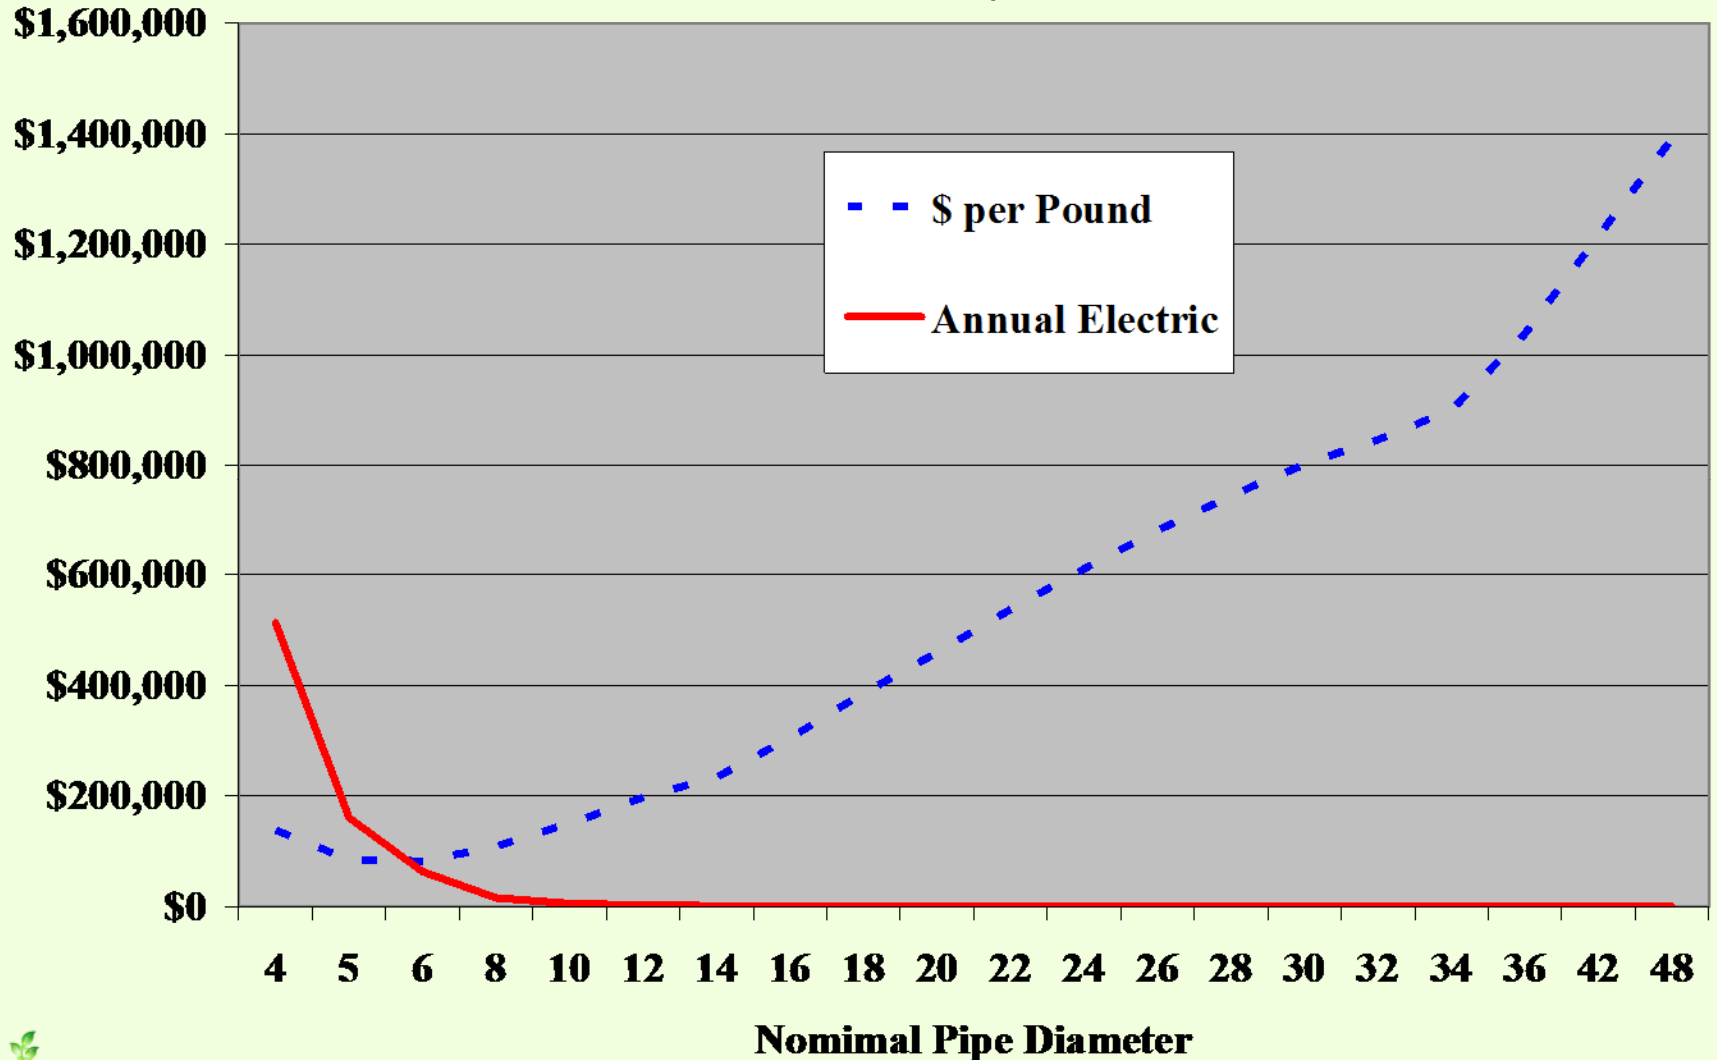

Annual Cost of Pipe & Annual Cost of Electricity for pumping 1,000 GPM over a Distance of 5,000 Feet

Pipe Capital Cost & Annual Electric Cost vs. Diameter for Flowing 1,000 GPM for a Distance of 5,000 feet

Annual Cost of Pipe & Annual Cost of Electricity for pumping 1,000 GPM over a Distance of 5,000 Feet

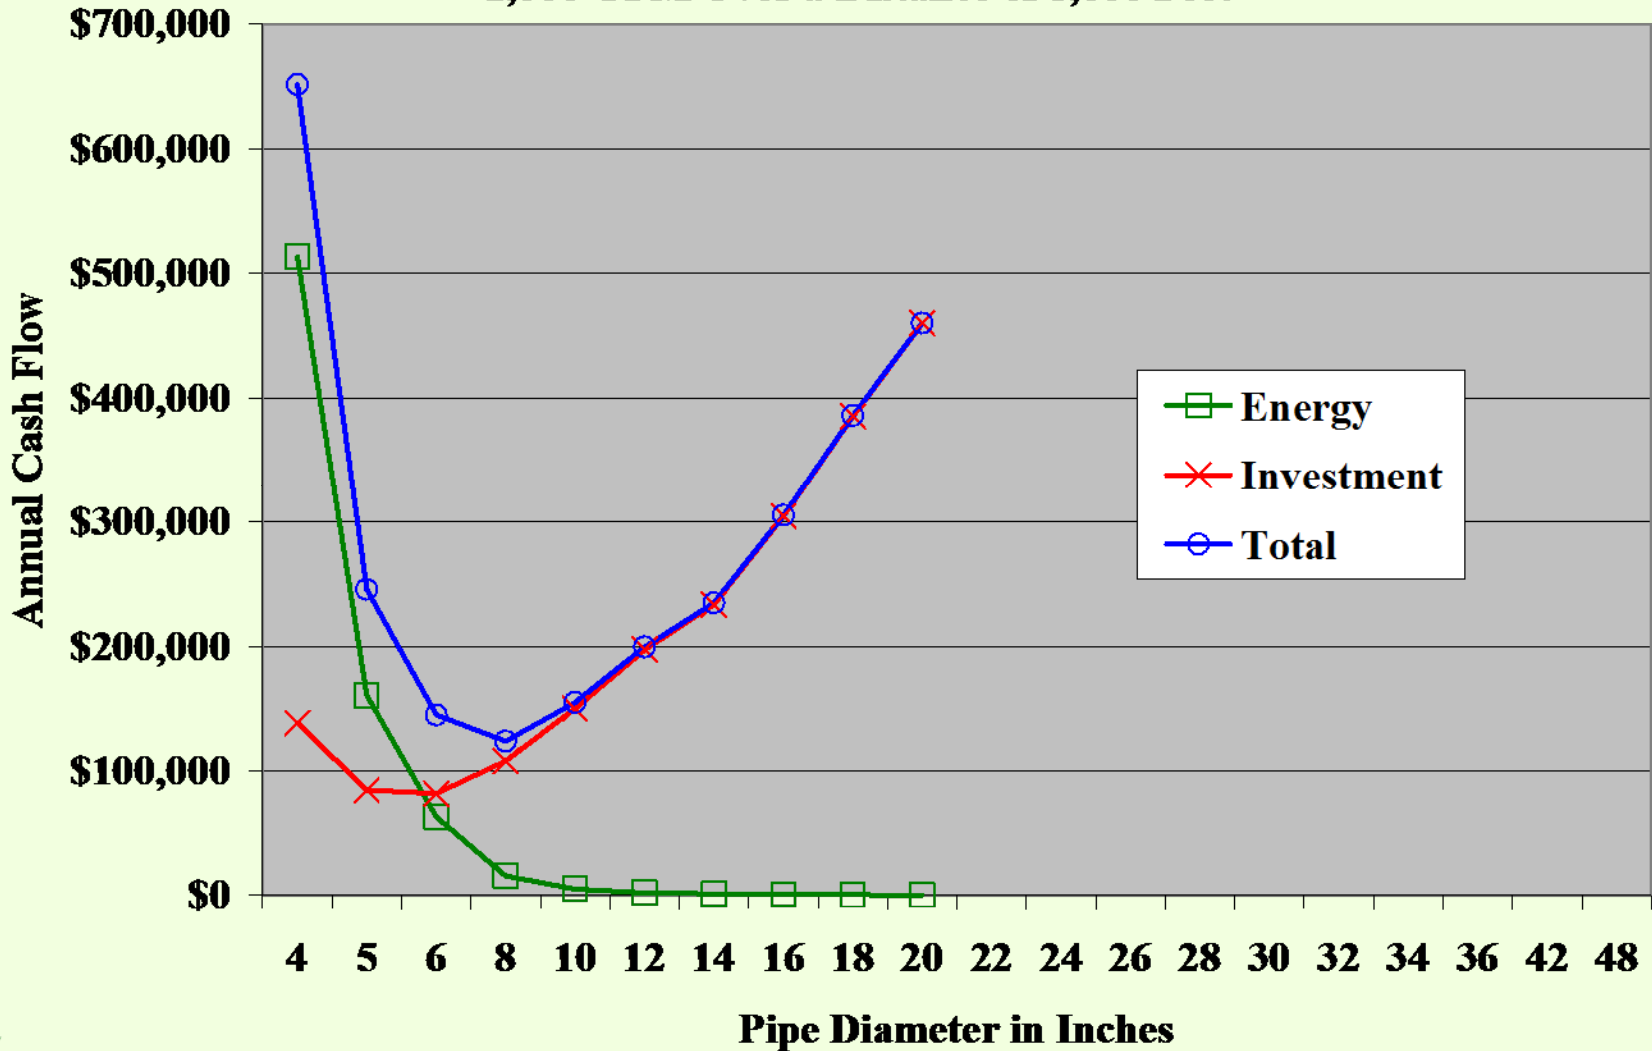

$$y = ax + \frac{b}{x} + c$$

$$x = \sqrt{\frac{b}{a}}$$

Optimized Pipe Sizing - Annual Loan Payment & Annual Pumping Cost for 1,000 GPM Over a Distance of 5,000 Feet

- **Short Life**
- **Cheap Energy**
- **Few Hours of Operation**

Optimized Pipe Sizing - Annual Loan Payment & Annual Pumping Cost for 1,000 GPM Over a Distance of 5,000 Feet for a 4-Year Project

- **40-Year Life**
- **8,760 Hours of Operation**
- **Expensive Energy**
- **Low Finance Cost**

Optimized Pipe Sizing - Annual Loan Payment & Annual Pumping Cost for 1,000 GPM Over a Distance of 5,000 Feet 40-Years, 1% Money

- **Optimization**
- **Capital**
- **Operation and
Maintenance**

- **Project Life**
- **Interest Rate**
- **Hours of Operation**
- **Pump Efficiency**
- **Motor Efficiency**

- **Water**
- **50,000 Feet**
- **13,000 GPM**
- **80% Pump Efficiency**
- **96% Motor Efficiency**

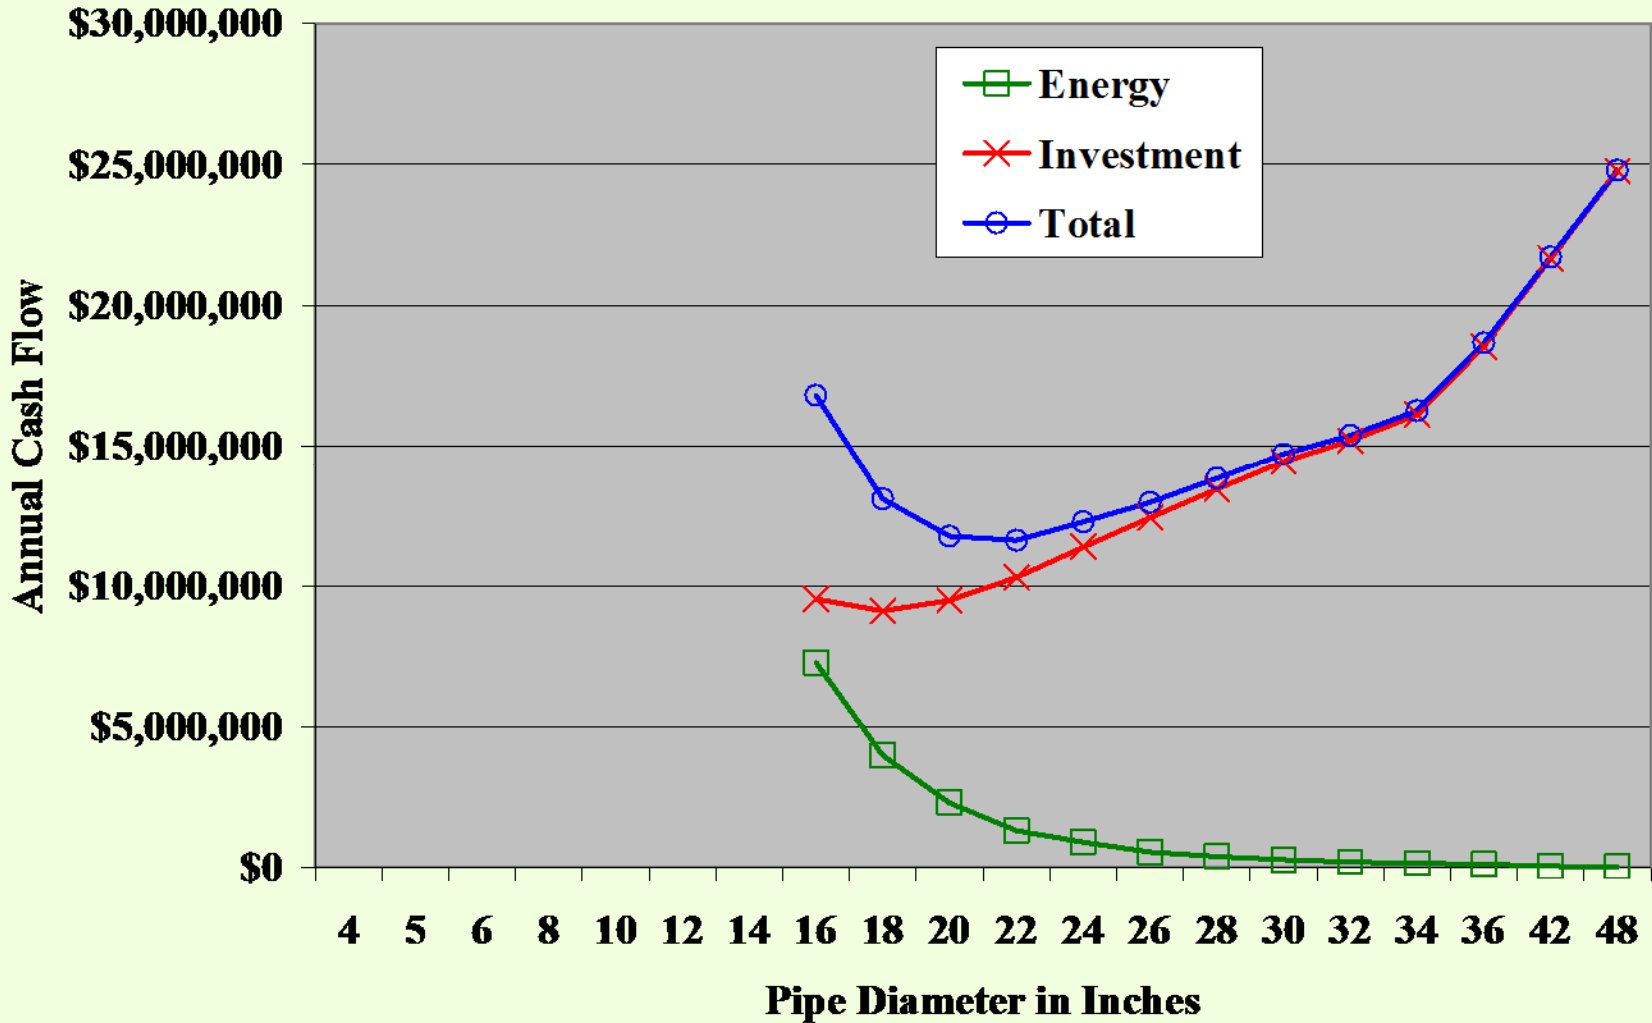

- **7,280 Hours**
- **\$0.07 per kWh**
- **5-Year Project Life**

- **12% Loan Interest Rate**
- **Maintenance is 4% of Capital**

Optimized Pipe Sizing - Annual Loan Payment & Annual Pumping Cost for 13,000 GPM Over a Distance of 50,000 Feet

- **Engineering Optimization**
- **Test for Corporate Profits**

- **XYZ Pipe Company**
- **\$21,000,000 sales**
- **28% tax bracket**

- **Sales to Increase**
2% per year
- **Operating Expense**
\$14,000,000

Engineers present Management with 3 new pipeline proposals
